## TECHNICAL NOTES

### CONCEPTS AND DEFINITIONS

The Balance of Payments (BOP) and International Investment Position (IIP) statistics are compiled by the External Sector Statistics Division of the Statistics Department of the National Bank of Cambodia (NBC). BOP and IIP statistics are published on a quarterly basis in local currency (in KHR billion). From the second quarter of 2019 onwards, the NBC compiles and publishes the Balance of Payments (BOP) and International Investment Position (IIP) statistics, based on the Balance of Payments and International Investment Position Manual, the Sixth Edition (BPM6), published in 2009 by the International Monetary Fund (IMF).

These statistics cover all economical transactions of economic institutional units such as general government, central bank, deposit taking institutions, other financial institutions, business enterprises, households, and non-profit institutions serving households as the residents of Cambodia with the nonresidents. All transactions are recorded at market prices, wherever possible, and based on an accrual basis. For the current practices, some data and classifications are estimated due to the insufficient data sources. Merchandise trade data is collected from the General Department of Customs and Excise of Cambodia of the Ministry of Economy and Finance (MEF). The exports of goods are recorded based on a free on board (F.O.B) basis, while the imports of goods associated with a cost principle of insurance and freight (C.I.F) basis are to be adjusted to F.O.B value. Other administrative data, especially data for services, primary income, and secondary income, are recorded when economical transactions occur or on an accrual basis; while the other data, which are not accessible from the administrative sources, are taken from the International Transaction Reporting System (ITRS), recorded on a cash basis, and from an estimated data from surveys (if any). At the same time, financial transactions are recorded whenever economic transactions occur or on an accrual basis. The recordings of arrears are consistent with BPM6 standard.

Accordingly, the compilers of BOP and IIP data face many challenges. For instance, in the current account, the challenges include 1/- the coverage of Goods that are not passed through the custom 2/- some service items and primary income data from administrative sources are available only in semester or annual basis and some are from the occasional surveys and 3/- the limitation of data sources on secondary income under the form of private transfer, government transfer and capital transfer. Likewise, the data received on IIP are still inadequate such as foreign direct investment and other investment by private sector as well as the Cambodians' investment abroad due to the constraints on data sources. Currently, Foreign Direct Investment (FDI) data relies heavily on administrative data; however, in standardized rule, the FDI data should be compiled based on a regular survey. Within the same context, the compilation of FDI statistics on the country of origin of foreign investors is not fully accessible. At the present time, in terms of foreign debt, data source is only available to compile external debt of public sector, particularly in general government and central bank; while the data source to compile external debt of private sector, except banking sector, is not available. Moreover, a regular survey to compile this data is not feasible.

### EXPORTS AND IMPORTS OF GOODS

The estimated methodology for General Merchandise Trade is made for exports and imports with tax or tax-free, including informal trade.

**Export Goods** is estimated by the main commodities such as garments (clothes, footwear, travelling goods and others garments), manufacturing products excluded garments (vehicle parts, electrical parts, bicycles and others manufacturing products), agricultural products

(rubber, paddy rice and other agricultural products) and re-exports, which are based on the data from the General Department of Customs and Excise of Cambodia of the Ministry of Economy and Finance (MEF), combined with an additional estimation of informal trades through the border trade observations, and an additional data from relevant ministries and business partner countries.

**Import Goods** is estimated by the main commodities such as raw material imports, garment materials, construction materials and equipment, vehicles, petroleum, food and beverage, non-monetary gold and other goods, based on the data from the General Department of Customs and Excise of Cambodia of the Ministry of Economy and Finance (MEF), from C.I.F basis to F.O.B. basis, combined with an additional estimation of informal trades through the border trade observations, and an additional data from relevant ministries as well as mirror data.

## **SERVICES ACCOUNT**

Freight is estimated at 9 percent of C.I.F while insurance fee is at 1 percent of C.I.F. Freight for imports and exports are apportioned among air, sea, road, and other transport means. Freight on imports carried by nonresident airlines is estimated by applying an average freight rate per ton to the quantity of imports. Freight on exports carried by the resident airlines is estimated by using the same methodology.

**For Air Transport:** Passenger fares paid by residents to nonresident airlines are estimated based on information on the number of passengers combined with data collected by the State Secretariat of Civil Aviation and the General Department of Immigration of the Ministry of Interior (MOI) on the number of resident and nonresident arrivals and departures, and the number of passengers on each airline. The average fare of both resident and non-resident passengers, paid to both domestic and non-resident airlines, are estimated by using data from travel agencies and ticket prices on each airlines' website. Other air transportation services are estimated from an information provided by the resident airlines for expenditure in foreign airports and an information provided by the State Secretariat of Civil Aviation for expenditure in Cambodia by nonresident airlines.

**For Sea Transport:** Freight on imports carried by nonresident carriers is estimated by deducting freight on air imports from an estimation of freight on total imports and applying to the result of the share of nonresident shipping. Freight on exports carried by resident carriers is estimated by multiplying an average freight rate for exported goods with a proportion of the ton of exports estimated to be carried by residents. Other sea transportation services are estimated from information provided by resident shipping agents and port authorities.
